

Herbicides

Euphoria WG

Water Dispersible Granules

Plant Protection and Inspection Services License. No.: 4428/צח/20

Package: 0.5 Kg

Contains: 40% Carfentrazone Ethyl

Group: 14

General: Euphoria is herbicide intended for post-emergence broadleaf weeds. Contains Carfentrazone Ethyl, Group 14, PPO inhibitors. The product is absorbed by plant foliage immediately after spraying, plants die after several days. The product has no residual activity in preventing weed emergence.

When spraying herbicide in orchards, preparing land for seeding and spraying fallow land, Euphoria must be combined with preparations containing glyphosate (Roundup, Gallop) to improve weed control and enabling a wider range of control for weeds that are not sensitive to glyphosate preparations, such as mallow, squirting cucumber and common purslane.

Controlled weeds: Bindweed, xanthium, datura, mallow, mustard, hawkweed, common sowthistle, sunflower, milk thistle, briar, crown daisy, marigold, groundsel, sand rocket, Spanish pink mustard, squirting cucumber, beets, toothpick weed, goosefoot, black nightshade, common chicory.

Instructions for Use

Crop	Dosage/Dunam	Treatment Time
Wheat (Galil, Gadish, Bar-Nir, C-9).	4g + Derby 4cc	From leaf stage 2-3 to flag leaf emergence
	4g + Duplosan 75 cc	
Preparing land for seeding	5g + Gallop 300cc	Pre-seeding
Within a populated area	5g + Gallop 200-300cc	

Along railroad tracks and highway shoulders	5g + Gallop 200-300cc	
Areas surroundings towns and farming facilities without cultivated plants	5g + Gallop 300cc	
Around water reservoirs and drainage ditches	5g + Gallop 300cc
