

Fertilization and Nutrition

Super Set

Solution

Contains:

10.3% Phosphorus, 1.3% Boron, 3.9% Molybdenum, 10.5% Potassium

General: Super Set is a preparation that encourages and improves blooming and fruit formation in various crops. Super Set contains phosphorus, potassium, molybdenum and Boron and a unique mixture of polymers. Super Set is a biostimulant for foliar spraying containing specific fertilizers intended to help create a quality flower and assist with fruit formation. The unique polymer mixture formula improves and contributes to rapid and quality pollen tube germination.

Warning: Hazardous upon ingestion.

Crop	fertigation Dose	No. of Treatments
Stone fruit	0.3% from initial bloom	2-3 sprayings before and after blooming
Pome fruit	0.3% from initial bloom	2-3 sprayings before and after blooming
Citrus	0.3% from initial bloom	2-3 sprayings before and after blooming
Vegetables	300 cc/dunam	Every 10-15 days after first leaf
Strawberries	300 cc/dunam	Every 10-15 days after first leaf
