Growth Regulators

Agritone SL

Soluble Liquid

Plant Protection and Inspection Services License. No.: 1800/הצ/08

Package: 0.5, 5 liters

Contains: 18g/l nad (naphthalene-acetamide), 6.75 g/l naa (naphthalene-acetic-acid)

General: Agritone is a plant growth regulator intended to increase fruit formation in squash in cold weather or other periods of poor fruit formation and fruit dilution in apples. Agritone is a strong fruit dilutor in apples. Agritone might reduce the general harvest in apples, but provides larger and higher quality fruits, which make up for the decline in the general harvest. Agritone saves work days for manually diluting apples.

Instructions for Use

Crop	Use	Concentration	Treatment Time	Remarks
Squash	Increasing fruit set	0.1%	Spray every 5 days when bloom begins	Do not spray in severe heat or when the plants are under stress
Apple Species: Yellow	Fruit dilution	0.3-0.4%, combine with Triton 100 x at 0.025% concentration	7 days after bloom peak	• Yellow dosage as per blooming intensity. • Do not spray trees under stress. • Do not spray on trees with thin bloom or poor fruit set. • Do not spray on trees in the year after fruit plenty. • Do not exceed 100l/d spray volume • May reduce the general yield, compensating with greater fruit size
Apple Species: Gala		0.3%, combine with Triton 100 x at 0.025% concentration	7 days after bloom peak
