

Super Fertilizer Series

Silanit Fertiorgan Ca

Salinity correcting calcium fertilizer | Contains: Organic matter 30% W/V | Calcium 7.5% W/V, 9.6% W/W | Chelate 7.5% W/V, 9.6% W/W

General

Silanit is a unique product for treating crops sensitive to irrigation water and ground salinity. The product is recommended for soil with organic matter deficiencies and salinity problems. The product acts to increase microbial activity in the neutralizing sodium ions (NA) and enabling the absorption of calcium and multiple micro and macro-elements. Highly recommended for crops suffering from calcium deficiencies.

Crop	Start Time	Saturation Dose	Total Application
Fruit trees	From tree awakening	2 l/dunam	Every 10-25 days along with fertilization stages
Citrus	Before blooming	2 l/dunam	Every 10-25 days along with fertilization stages
Vegetables	From planting	2 l/dunam	Every 10-25 days along with fertilization stages
Vines	From awakening	2 l/dunam	Every 10-25 days along with fertilization stages
