

Amigo® SL 18

Soluble Liquid

Liquid growth regulator for fruit enlargement in aprix

Contains: 8 g 2,4-D (ispropyl ester) per liter

10 g NAA per liter

Plant Protection Services License. No.: 1865/חנ/06

UN No.: 1219

Instructions for Use:

Crop	Objective	Treatment Time	Concentration (%)	Spray Volume	PHI
Apricot Species: Raanana Cherry Species: Bing, Burla Japanese Plum Species: Royal -Zee, Sun Gold, Black Amber, Black Beauty, Black Diamond	Enlarging fruit and layering	When pit point begins to harden	0.3%	100-150 l/dunam according to tree size	30

Application Precautions:

- Do not spray before or after the physiological date of pit point hardening and **do not exceed** the recommended concentration.
- Spray only on trees/plots where trees are healthy and strong.
- Do not spray in case of fog, wind or expected rain and at **high air temperatures** and relatively low humidity (heat wave).

- Chlorosis and leaf fainting are normal in apricots, plums and cherries, disappearing after a few days without detrimentally impacting the crop or tree. Cauterization may be required at the top of young growths of annual branches, causing a temporary growth health.
