

## **Miscellaneous**

### **Pherocon CMDA Combo**

**For monitoring apple moths**

**Package: 10 units/package**

**Contains:** Pheromone

**General:** The Pherocon® dispenser is intended for monitoring apple moth in regular and mixed plots. Pherocon® CMDA Combo + AA consists of a food bate and a synthetic female pheromone. Enhances make trapping up to 6 times female trapping.

### **Instructions for Use**

- Spread and install the monitoring traps before spring awakening.
- Place the monitoring trap high in the tree, at the top third of the treetop.
- Place the monitoring trap in the outer tree canopy, on an open branch that is not blocked by leaves or developing fruits.
- Replace the CMDA Combo™ + AA baits ever 4 weeks.
- Replace the traps (sticky plate) every 4 weeks or when they are covered with dust or pest debris (trap efficiency declines after trapping 50 moths or more).

### **Storage Instructions**

- Keep in the original package, closed only.
- Keep away from children or food.
- Refrigerate.
