

Fertilizer Feed Borapid

Liquid Boron for Rapid Absorption | Contains: 150 g per liter of boron

The preparation contains a boron formulation for rapid and efficient plant absorption. Boron is important to blooming and fruit formation quality, comprising a component of the cell wall. In addition, boron improves the plant's ability to cope with stress, synergizes with calcium and improves its operation.

Crop	Spray Dosage	Fertigation cc/dunam	No. of Treatments
Fruit trees	0.1-0.3%	400-600	2-3
Olives	0.25-0.5%	500-800	1-2
Beets and sunflowers	0.25-0.5%	800-1000	1-2
Strawberries	0.1-0.25%	200-400	1-2
Grapes	0.3-0.5%	300-500	1-2
Flowers and ornamental plants	0.25-0.3%	300-500	1-2
