

Herbicides

Relax 250 SL

Soluble Liquid

Plant Protection and Inspection Services License. No.: 4244/צח/15

Selective herbicide for legumes, Malali watermelon and cotton

Package: 5 liters

Contains: 200 g/liter fomesafen

Group: E

General: Relax is a herbicide acting against broad leaf weeds in seed watermelons, beans, peas and chickpeas. Relax is intended for application in the pre-emergence stage in medium and heavy soil only for these crops and for post-emergence treatment in beans. Relax is absorbed by the broad leaf weed foliage or roots, impairing their photosynthesis mechanism, thus causing their death.

Treated weeds: Abutilon, Mustard, Mexican fireplant, Amita, Amaranth, Common sowthistle, Musk deadnettle, Field thistle, Turnip, Chicory, Marigold, Chamomile, Common groundsel, Sleder safflower, Common fumaria, Turnsole, Hawksbeard, Weed, Fennel, Poppy, Bells of Irland, Black Nightshade.

Instructions for Use

Crop	Dosage	Application Method	Notes
Seed watermelon	100 cc/dunam	Pre-seeding or pre-emergence	
Peas for canning, beans, chickpeas	150 cc/dunam	Pre-emergence: From seeding until 3 days thereafter.	Add 0.5% Shetach 90 to control existing weeds.
Beans	50 cc/dunam	Post-emergence: Spray on crop landscape	Add 0.1% Shetach 90. Do not spray after bean fertigation. Spray young weeds in growth stage.
Cotton	100 cc/dunam	Pre-seeding or pre-emergence	Where less than 100mm rain is assumed after spraying

	150 cc/dunam	Pre-seeding	Where more than 100mm rain is assumed after spraying
--	-----------------	-------------	--

Subsequent Cycle Crops:

The following can be grown on the treated plot in the subsequent season: peas, beans, cotton, chickpeas, peanuts and vetch.

Wheat – Wheat can be planted 9 months after spraying Relax. Provided the previous crop was sprinkler irrigated with 400mm after spraying or at least 400mm rainfall after spraying. In the absence of such quantity, wheat can be planted after 18 months. In any event, the field must be plowed before planting the wheat.

Feed corn – Corn can be planted 14 months after applying Relax.

Sunflowers, sorghum, sweet corn – Can be planted 18 months after applying Relax.
