

Super Fertilizer Series

Humidan

Liquid fertilizer with 37% Fulvic acid, 3% Humic Acid

Potassium 11.5% | Organic carbon 22% | Organic nitrogen 4% Added copper and zinc PH 4.5 | Specific gravity 1.27

General

Humidan is derived from a natural extract containing fulvic and humic acids that help nutrient absorption and soil improvement. The preparation helps with the absorption of macro (potassium, nitrogen, phosphorous) and micro (iron, zinc, manganese, copper and more) fertilizers implanted in the soil and drastically improving the plant's ability to absorb the fertilizer and transport it through the plant. The preparation also helps reduce plant stress. Combining it with most nutrients is possible and recommended.

Not intended for domestic use - For agricultural use only!

Crop	Spray Dosage
Avocado, mango, lychee	6-10l throughout the fertilization stage
Deciduous plantations	8-12l throughout the fertilization stage
Pepper, tomato, cucumber	2-4l during the fertilization stage
Peas, corn, beans, lettuce, broccoli, cabbage	1.5-2l during the fertilization stage
Strawberries	3.5-5l during the fertilization stage
