Masamite®20 WP

Wettable Powder

Plant Protection and Inspection Services License. No.: 1413/חנ/96

Kills mites in apples, pears, vegetables, flowers and citrus

Package: 1 kg

Contains: 20% tebufenpyrad

Group: 21A

General: Masamite 20 WP is a general mite pesticide. Masamite rapidly kills all levels of mite development, including eggs, nymphs and adults.

Masamite should not be continuously sprayed, but rather occasionally replaced with mite pesticides of other classes.

Masamite is of low toxicity or is not toxic to natural enemies, such as: Chrysopa spp, Stethorus punctillum, Amblyseius longispinosus, Orius spp, Typhlodromus occidentalis. In apple orchards with previous Masamite durability, do not spray Masamite alone – combine it with mite pesticide of a different class.

Instructions for Use

Crop	Pest	Dosage (g/dunam at up to 100 l/dunam spray volume)	Dosage (%) in spray volume over 100 l/dunam	PHI
Apple	European Mite, Yellow Mite	50	0.05	21
