

Fungicides

Phosphiron 500 SL

Soluble Liquid

Plant Protection and Inspection Services License. No.: 1851/צח/05

Fungicide for exterminating downy mildew in various crops, Alternaria and brown rot in citrus.

Package: 20, 180 liter

Contains: 500 g/liter potassium phosphite

Group: Unknown

General: Phosphiron is a preparation intended to kill downy mildew in vegetables and grapevines, Alternaria and brown rot in citrus. The preparation contains salt, which contains phosphorous and potassium. Phosphiron operates in a systemic manner in the plant, moving both upwards and downwards. Phosphiron raises plant phytoalexine content and thus raises its fungal resistances. For optimal results, Phosphiron must be sprayed before disease onset and 2-3 more times for achieving good extermination.

Instructions for Use

Crop	Disease	Dosage (cc/dunam)	Concentration %	PHI
Cucumber, Melon	Downy Mildew	350	-	3
Grapevine	Downy Mildew	-	0.3	3
Onion	Downy Mildew	350	-	3
Chickpeas, Peas	Downy Mildew	350	-	3
Citrus	Brown Mold	-	0.25	3
	Alternaria
